Education

Gandhinagar Institute of Technology

Bachelor of Engineering in Computer Engineering

June 2019 - July 2023

Gandhinagar, Gujarat

Experience

The Intellify

Jan 2024 - June 2026

Unity Game Developer

Ahmedabad, Gujarat

- Developed and deployed multiple mobile games and AR applications for Android and iOS using Unity and C#, focusing on scalable gameplay systems and modular architecture.
- Integrated third-party services including Firebase (Analytics, Crashlytics) and Google AdMob for analytics, stability, and monetization.
- Implemented reusable, maintainable code using OOP principles and design patterns, contributing to production-ready applications.
- Collaborated on gameplay programming, UI implementation, optimization, and feature integration across multiple game genres.

The Intellify

June 2023 - Dec 2023

Unity Developer Intern

Ahmedabad, Gujarat

- Assisted in Unity-based game and application development, building strong foundations in C#, gameplay programming, UI handling, and debugging.
- Gained hands-on experience in AR development, including marker-based interactions and 3D content integration.
- Contributed to feature implementation while following collaborative workflows such as version control and mobile application deployment processes.

Projects

Hyper-Casual Games

- Architected and implemented the core endless runner loop, including player movement, obstacle spawning, and dynamic difficulty scaling.
- Developed procedural obstacle generation with configurable spawn patterns and timing control.
- Implemented progression systems including collectibles, in-game currency, and daily rewards system.
- Designed responsive UI for multiple resolutions and integrated AdMob (interstitial, rewarded ads) for monetization.

Puzzle Games

- Designed and implemented level-based puzzle mechanics with scalable difficulty and data-driven level system for rapid iteration.
- Built modular gameplay systems and engagement features such as progressive unlocks and mechanic variation to improve retention.
- Created and optimized puzzle assets using Blender (modeling, UV texturing) for performance-efficient integration.

Car Games

- Developed endless road generation using modular track segments with smooth forward motion on curved paths.
- Implemented traffic system with dynamic density control and vehicle movement using physics/velocity-based approaches.
- Designed car tuning mechanics and progression systems, including vehicle purchase and weapon upgrade system.
- Optimized runtime performance for continuous world generation and stable gameplay.

AR Marker-Based App

- Developed a marker-based AR application using Vuforia to trigger interactive educational content.
- Implemented image recognition to display videos, 3D models, animations, and particle effects dynamically.
- Optimized tracking performance and built user-friendly UI with native media playback for Android and iOS.

Technical Skills

Languages: C# (OOP, SOLID)

Tools: Unity, GitHub, Visual Studio, Blender, Figma

Concepts: ScriptableObject Architecture, Optimization (Object Pooling, GC), Animation Systems (Animator, Blend Trees, Timeline)
